

Notes on using vim

Richard Klima

June 6, 2017

1 PEP8 usage

To start pep8 checker - press F7 in vim
You can set which error to ignore in */ignore/flake8*
Now we ignore too long lines - error E501

2 Autopep8 usage

To automatically change Python code in order to comply with PEP8 format,
write in *VIM* : *Autopep8*
You can also disable some changes of some errors like we did in our *.vimrc* by
adding *let g : autopep8_ignore = " E501"*
